FROGGIE DAO

TREASURY GOVERNANCE WHITEPAPER

Treasury Governance and Genesis NFT Genesis Identity White Paper

VERSION 1.0 | OCTOBER 2026

DAO OWNS. GOVERNANCE DECIDES. TREASURY MANAGES.

Public Assets • Co-governance • Transparent Implementation • Sustainable Development

issuing authority note

This white paper constitutes the V1.0 version of Froggie DAO's treasury governance framework and Genesis NFT genesis identity rights. The terms "establish," "adopt," and "implement" herein describe Froggie DAO's institutional arrangements and implementation standards; specific on-chain deployment, identity minting, fee collection, asset allocation, and actual distribution shall be governed by the officially launched smart contracts, public addresses, governance resolutions, and settlement records.

The document adheres to treasury operation guidelines that ensure the ownership of public assets, the separation of governance and execution, auditable fund operations, and traceable information disclosure. Genesis NFT is an on-chain identity and rights certificate; it does not represent individual property rights to the DAO's treasury assets.

FROGGIE DAO • GENESIS NFT | 5 Identity Levels | Treasury Transparent Governance

FROGGIE DAO / GOVERNANCE FRAMEWORK

PART 01

Genesis Identity and Public Capital

Starting from the first cohort of global community members, establish the institutional foundations for on-chain identity, collaborative governance, and public asset management.

GENESIS IDENTITY & PUBLIC CAPITAL

Preamble | Preamble

Froggie DAO Treasury serves as the public asset management system and long-term capital infrastructure for Froggie DAO. Through institutionalized, transparent, and on-chain governance mechanisms, Froggie DAO integrates publicly formed assets—developed collectively by its community—into a public management framework, thereby supporting long-term capital reserves, risk hedging, product development, community growth, and ecosystem collaboration.

All assets incorporated into the treasury shall be operated in accordance with the DAO public asset principles. Governance authority, asset authorization, actual execution, and information disclosure shall be managed, respectively, by the DAO Governance Framework and the Treasury Governance Framework.

DAO Owns → Governance Decides → Treasury Manages → Multisig Executes → Community Verifies

Assets belong to the DAO; governance determines the strategic direction, the treasury handles asset management, multi-signing ensures execution, and the community performs validation.

CHAPTER 01 / TREASURY POSITION & MISSION

Chapter 1 | Treasury: Positioning and Mission

Governance Mission	Core Objectives of Froggie DAO
Capital Reserve	Establish a sustainable foundation of DAO long-term public assets.
Strategic Reserve	Configure assets that align with Froggie's corporate culture, product portfolio, and long-term ecosystem strategy.
Liquidity Management	Sustain core operations, ecosystem delivery, and appropriate public capital liquidity.
Ecosystem Funding	The governance resolution supports Meme Studio, Froggie ID, Global Guild, Froggie World, and related collaborations.
Risk Reserve	Establish buffer mechanisms that are market-oriented, based on agreements, and addressing liquidity and systemic risks.
Capital Efficiency	Enhance the efficiency of public capital utilization within controllable risk limits and authorized scopes.

Preserve Capital → Improve Efficiency → Support Ecosystem → Strengthen Treasury

Protect capital → Enhance capital efficiency → Support the ecosystem → Strengthen the state treasury.

CHAPTER 02 / GENESIS TREASURY

Chapter 2 | Genesis Treasury

Genesis Treasury is the initial asset reserve established by early community members during the genesis phase of Froggie DAO, which then integrates into the DAO's public governance framework. Genesis Treasury bridges cultural consensus, identity-based participation, and treasury governance, thereby establishing a clear pathway from community engagement to on-chain public asset management.

During the genesis phase, treasury assets may consist of compliant genesis contributions, ecosystem revenues, protocol revenues, and other approved legal sources; for each asset, the on-chain transaction, asset type, and corresponding source shall be recorded upon its inclusion in the treasury.

Community Consensus → Genesis Participation → DAO Public Assets → Treasury Governance → On-Chain Transparency

Cultural consensus →创世 participation → DAO public assets → treasury governance → on-chain transparency.

CHAPTER 03 / GENESIS NFT IDENTITY & BENEFITS

Chapter 3 | Genesis NFT: Genesis Identity Rights System V1.0

Froggie DAO is now opening its Genesis NFT Genesis Identity Program to the first batch of global community members. The Genesis NFT serves as the on-chain identity credential during Froggie DAO's genesis phase, establishing long-term interdependencies with Froggie's ecosystem benefits, fee distribution mechanisms, and DAO governance framework. Identity tiers range from G1 to G5, with specific permissions governed by each tier and the official governance charter.

G1 | Genesis Member | Genesis Member

Eligibility Criteria	Seat allocation or fulfillment of conditions
100 U	No limit (no upper cap set)

Genesis Member NFT; 1% equivalent FROGGIE creation bonus entitlements; DAO creation identity

CORE RIGHTS / Genesis NFT + 1% FROGGIE + DAO Genesis Identity

G2 | Genesis Builder | Genesis Builder

Eligibility Criteria	Seat allocation or fulfillment of conditions
500 U	Limited to 1,000 seats worldwide

Genesis Builder NFT; 2% equivalent FROGGIE creation bonus entitlements; 2× order limit after DAO launch; shared 1% transaction fee dividend pool; DAO governance participation rights

CORE RIGHTS / Genesis NFT + 2% FROGGIE + 2x Liquidity + 1% Fee Pool + DAO Governance

G3 | Genesis Partner | Genesis Partner

Eligibility Criteria	Seat allocation or fulfillment of conditions
1,000 U	Global limited edition: 500 seats

Genesis Partner NFT; 3% equivalent FROGGIE launch bonus entitlements; 2× order volume after DAO launch; shared 1% transaction fee dividend pool; DAO governance participation rights and access to co-creation of the core ecosystem

CORE RIGHTS / Genesis NFT + 3% FROGGIE + 2x Liquidity + 1% Fee Pool + DAO Governance

G4 | Genesis Core | Members of Genesis Core

Eligibility Criteria	Seat allocation or fulfillment of conditions
3,000 U	Limited to 199 seats worldwide

Genesis Core NFT; 5% equivalent FROGGIE launch bonus entitlements; 2× order volume after DAO launch; shared 1% transaction fee dividend pool; DAO governance voting rights and Treasury governance voting rights

CORE RIGHTS / Genesis NFT + 5% FROGGIE + 2x Liquidity + 1% Transaction Fee Pool + DAO Governance + Treasury Governance

G5 | Genesis Ambassador | Genesis Ambassador

Eligibility Criteria	Seat allocation or fulfillment of conditions
Cannot be purchased directly	Top 10 Recommendations for Genesis Core

Upon fulfilling the requirements for Genesis Community development, you will receive a Genesis Ambassador NFT; access to a 2% transaction fee dividend pool; participation rights in DAO core governance and Treasury strategic governance; and the opportunity to contribute to global community development and major ecosystem collaborations.

CORE RIGHTS / Top-tier Genesis Identity NFT + 2% Transaction Fee Pool + DAO Core Governance + Treasury Strategic Governance

Boundary Between Creation Identity and Treasury Permissions

G1–G5 NFTs denote identity tiers and eligible ecosystem benefits. The fee-related benefits for G2–G5 depend on the actual fee collection, applicable pool balances, and settlement eligibility; the Treasury privileges for G4 and G5 pertain to participation in, oversight of, and governance of relevant matters, but do not grant direct rights to withdraw, personally dispose of, or unilaterally transfer treasury assets.

The pricing benchmark, conversion timeframe, wallet delivery mechanism, and distribution cycle for the "Equivalent to FROGGIE Genesis Grant Rights" shall be uniformly disclosed in accordance with the Genesis Identity activity rules. The definition of orders under the "2× Order Limit," along with the benchmark quota and applicable usage conditions, shall be governed by the quota rules published upon the launch of the DAO product.

CHAPTER 04 / GENESIS PARTICIPATION & ON-CHAIN PROOF

Chapter 4 | Genesis Participation & NFT Recording

Genesis members at each tier shall fulfill the participation or qualification requirements in accordance with the public identity rules, thereby generating a Genesis participation record, an identity verification record, an NFT minting record, and an ecosystem rights archive. A G5 Genesis Ambassador acquires identity status by referring 10 eligible G4 Genesis Core members; this status cannot be acquired through direct payment.

Public on-chain certificates shall include the NFT's tier, minting batch, validity status, entitlement status, and verifiable on-chain transaction identifiers. Member contribution records may be linked to NFT identity attribution; however, genesis identity and contributions to independent public assets represent two distinct dimensions, and no individual identity shall equate to a property rights certificate for treasury assets.

Identity Record	Meaning of governance
Genesis NFT	Record the creation levels G1–G5 and their corresponding community participation eligibility.
Participation Record	Record the amount participated in, the specific actions taken, and the outcome of the eligibility review.
On-Chain Proof	Record verifiable NFT minting, holding, and related rights distribution events.
Community Contribution	Document contributions from creators, promotions, community collaborations, and public services.
Treasury Contribution	Separately record the contributions of lawful assets that have been transferred to the public treasury.

Identity ≠ Treasury Ownership / Governance Right ≠ Unilateral Transfer

Identity does not equate to state treasury property rights; governance authority does not confer the power to unilaterally transfer assets.

CHAPTER 05 / GENESIS FEE DISTRIBUTION

Chapter 5 | Fee Distribution: Genesis Transaction Fee Rights and Weighted Mechanism

The membership benefits of G2 Genesis Builder, G3 Genesis Partner, and G4 Genesis Core all specify "sharing a 1% transaction fee dividend pool"; the membership benefits of G5 Genesis Ambassador specify "sharing a 2% transaction fee dividend pool." Actual settlement is conducted using an independent ledger to record revenue sources, applicable pools, eligibility lists, weighting factors, settlement intervals, and distribution transactions.

The allocation structure for Creation Ambassadors consists of a 20% network-wide weighted component and an 80% team performance weighted component. The network-wide weighted component is allocated based on the applicable identity weights, while the team performance component is calculated according to the ratio of an individual's valid team performance to the total valid team performance across the entire network. Duplicate performance, invalid associations, canceled orders, and non-compliant transactions shall not be counted as valid performance.

Ambassador Settlement = 20% × Global Weighted Component + 80% × Team Performance Component

The above constitutes the allocation structure framework; the actual size of the dividend pool shall first be determined based on the officially announced fee pool rate.

100 BNB Transaction Fee Example | Based on the user-specified 20% total pool ratio

computational item	amount of money	rule
Total network transaction fees	100 BNB	Example aggregated amount for the settlement period
Genesis Ambassador-Allocation from the shared pool (20%)	20 BNB	100 × 20%
Full-network weighted portion (20% of the total pool)	4 BNB	20 × 20%, allocated based on identity weights
Team performance weighted component (80% of the total pool)	16 BNB	20 × 80%, allocated based on the proportion of effective team performance

100 BNB Transaction Fee Example | Based on the G5 2% fee pool terminology

computational item	amount of money	rule
Genesis Ambassador Allocation-Total Pool (2%)	2 BNB	100 × 2%
Full-network weighted portion (20% of the pool)	0.4 BNB	2 × 20%
Team performance weighted component (top 80% of the pool)	1.6 BNB	2 × 80%

The inter-pool relationships, the allocation weights among the three types of identities, and the specific allocation of returns under the "shared 1% fee dividend pool" for G2–G4 shall still be clarified through unified, formal settlement rules. This white paper does not assume that each of the three identity types exclusively holds a separate 1% pool, nor does it treat any illustrative amounts as realized income.

CHAPTER 06 / GENESIS TREASURY ACTIVATION

Chapter 6 | Genesis Treasury Activation

The following items should be completed for the launch of Froggie DAO's Genesis Treasury: disclosure of the Genesis Treasury on-chain address; release of the Genesis NFT contract and identity rules; publication of Genesis participation rules; deployment of multi-signature authorization for the treasury; deployment of the fee collection and distribution contract; disclosure of on-chain assets and execution details; and establishment of initial risk controls along with audit records.

Following the deployment of the aforementioned foundational governance framework and the issuance of the launch announcement, Froggie DAO may utilize "Froggie DAO Genesis Treasury Activated" as the official indicator of its genesis treasury launch. The final asset size, asset composition, and records of genesis participation of the genesis treasury shall be subject to the actual on-chain data and formal settlement documentation; no predetermined fixed asset scale is established.

FROGGIE DAO / GOVERNANCE FRAMEWORK

PART 02

Treasury Assets and Capital Structure

Clarify the ownership, sources, and allocation principles of public assets to establish an independent, transparent, and governance-constrained treasury asset framework.

TREASURY ASSETS & CAPITAL STRUCTURE

CHAPTER 07 / TREASURY ASSET OWNERSHIP

Chapter 7 | Treasury Asset Ownership

All public assets of Froggie DAO Treasury belong to the Froggie DAO public treasury. The creator identity holders, Genesis NFT holders, governance members, treasury review members, multi-signers, and the execution team shall not acquire individual ownership of the public treasury assets based on their identity or role.

The entitlement to participate in NFTs, transaction fees, and governance roles constitutes specific rights or participation privileges exercised in accordance with established rules; such entitlements shall not be construed as unconditional ownership of specific state treasury assets. All state treasury assets may only be allocated, utilized, authorized, or transferred pursuant to formal governance frameworks.

CHAPTER 08 / TREASURY ASSET SOURCES

Chapter 8 | Treasury Asset Sources

- Genesis Contribution | Public contribution assets incorporated into the state treasury in accordance with law during the Genesis phase.
- Community Contribution | Voluntary contributions from the community to the public treasury.
- Ecosystem Revenue | Revenue generated from ecosystem operations, including original IP, digital products, and commercial partnerships and related services.
- Protocol Revenue | Revenue from agreements or services that, pursuant to established rules, are clearly attributable to the state treasury.
- Strategic Cooperation | Assets generated from compliance-related strategic cooperation and subsequently incorporated into the public treasury.
- Treasury Income | Treasury management income generated through lawful and compliant capital management.
- Other lawful sources of assets that have been formally approved under DAO governance procedures.

The transaction fee dividend pool, the ecosystem operation fund, and the public treasury assets shall be maintained in separate accounts. Transaction fee balances designated for identity-based allocation may only be processed in accordance with the publicly disclosed collection and allocation rules; public assets already transferred to the treasury shall be managed pursuant to the Treasury Governance Rules, and the identity-based allocation rules shall not be used directly as a substitute for the approval process for treasury assets.

CHAPTER 09 / TREASURY ASSET TIERS

Chapter 9 | Treasury Asset Structure: Four-Tier Asset Structure

top class	Asset Positioning	Governance Objectives
Tier I | Core Reserve	Core Reserve: Public capital designed to maintain liquidity and ensure principal safety	Security · Liquidity · Stability
Tier II | Strategic Assets	Strategic assets: allocations related to the Froggie brand, its ecosystem applications, and long-term development	Strategic Alignment · Long-Term Value
Tier III | Productive Assets	Efficiency assets: Utilize qualified capital management tools within the scope of authorization and risk control.	Capital Efficiency · Controlled Return
Tier IV | Operational Assets	Operating expenses: content, technology, security, community, and ecosystem collaboration expenditures	Ecosystem Development · Execution

Specific asset classes, weighting ratios, risk budgets, reserve sizes, and caps shall be established or adjusted by the Treasury Policy in accordance with governance procedures. The allocation of public capital shall not substitute short-term yields for capital safety and liquidity discipline.

FROGGIE DAO / GOVERNANCE FRAMEWORK

PART 03

Governance Structure and Implementation Mechanisms

Ensure that proposals, risk assessments, governance authorizations, multi-signature execution, and community oversight are subject to mutual checks and balances.

GOVERNANCE & EXECUTION

CHAPTER 10 / TREASURY GOVERNANCE STRUCTURE

Chapter 10 | Treasury Governance Structure

Froggie DAO Treasury is not directly controlled by any single individual or entity. Its governance structure comprises community governance, Treasury Governance Proposals, professional review by the Treasury & Risk team, governance voting and authorization, multi-signature or time-lock mechanisms, execution, and on-chain disclosure.

Community → Proposal → Risk Review → Vote → Authorization → Multisig / TimeLock → Execution → Disclosure

The powers of proposal, deliberation, decision-making, and implementation are separately vested.

CHAPTER 11 / TREASURY & RISK

Chapter 11 | Treasury & Risk: Treasury Risk Functions

Treasury & Risk is responsible for reviewing treasury proposals, assessing asset allocation, market and liquidity risks, as well as smart contract and protocol risks; it also develops allocation recommendations, risk exposure limits, and periodic risk reports, and oversees authorized execution activities.

Treasury & Risk shall possess only the authority to conduct professional reviews, exercise risk control, provide recommendations, and perform oversight; it shall not hold ownership of public treasury assets, nor shall it independently transfer core treasury assets.

REVIEW + RISK CONTROL + RECOMMENDATION + OVERSIGHT

CHAPTER 12 / GOVERNANCE COUNCIL

Chapter 12 | Governance Council: Treasury Governance Authority

During the Genesis phase, Treasury strategic governance and oversight are conducted through a DAO governance architecture. G4 Genesis Core holds participation rights in Treasury governance, while G5 Genesis Ambassador holds both participation rights in Treasury strategic governance and participation rights in DAO core governance. Relevant members may, in accordance with the formal governance charter, express opinions, submit proposals, or participate in eligible voting regarding the Treasury strategic direction, allocation policies, major budgets, significant asset operations, multi-signature structures, and critical risk matters.

The Governance Council and NFT governance entities hold governance participation rights governed by the charter, rather than ownership of assets. No single member may unilaterally control, transfer, or dispose of the core treasury assets. Governance weighting, voting thresholds, and conflict-of-interest avoidance are stipulated in the DAO Governance Framework.

CHAPTER 13 / TREASURY GOVERNANCE PROPOSAL

Chapter 13 | TGP Treasury Governance Proposal

Froggie DAO has established the TGP | Treasury Governance Proposal mechanism. All significant treasury-related actions that exceed the scope of existing authorizations must be formalized as proposals and obtain corresponding governance approval. The TGP must specify the purpose of the proposal, the type of assets, the scale of the assets, the intended use of funds, the execution address, the execution horizon, risk assessment, exit mechanism, and the entity responsible for execution.

Material treasury operations shall not be substituted by oral instructions or informal authorizations. A verifiable correspondence shall be established between governance resolutions, transaction execution, and fund movements.

Proposal → Risk Review → Governance Vote → Authorization → TimeLock → Execution → Disclosure

CHAPTER 14 / TREASURY DECISION LEVELS

Chapter 14 | Treasury Decision Levels

grade	Corresponding Item	Governance Requirements
T1 | Routine	Daily treasury operations and authorized routine execution matters	Execute in accordance with existing authorizations and routine reviews.
T2 | Major	Key configurations, major budget allocations, priority ecological investments, and significant liquidity adjustments	Raise the review tier, disclosure cycle, and multi-signature threshold
T3 | Strategic	Core reserves, long-term capital deployment, fundamental amendments to treasury regulations, and major security matters	Applicable to the highest level of governance, time locks, and emergency response constraints.

The higher the risk rating of an item, the stricter the review thresholds, disclosure periods, multi-signature requirements, time locks, and audit requirements will be. The specific thresholds and implementation parameters are stipulated in the Treasury Policy.

CHAPTER 15 / MULTISIG CONTROL

Chapter 15 | Multisig System

Core Treasury assets are managed via a Multisig Wallet and, in principle, shall not be controlled by a single private key. The multisig signers come from diverse governance bodies or professional roles, and the system implements segregation of duties, signing logs, key rotation, and risk contingency mechanisms.

The signer holds Execution Authority but does not hold Asset Ownership. Multiple signers may only execute matters for which formal governance authorization has been granted; they may not unilaterally determine the use of public assets.

CHAPTER 16 / TIMELOCK

Chapter 16 | TimeLock Mechanism

For major treasury-related transactions, a public waiting period is set via TimeLock. Once a governance resolution is approved, the transaction enters the queuing and time-lock phase based on its classification level, thereby allocating sufficient time for community verification, professional re-examination, and risk identification.

The time lock is used to mitigate risks such as malicious governance attacks, abnormal transfers, sudden changes in authorization status, and opaque large-scale transactions.

Vote → Queue → TimeLock → Execution

FROGGIE DAO / GOVERNANCE FRAMEWORK

PART 04

Capital Discipline and Risk Control

With capital security as the primary principle, this framework covers markets, agreements, keys, budgets, and emergency scenarios.

CAPITAL DISCIPLINE & RISK MANAGEMENT

CHAPTER 17 / TREASURY CAPITAL PRINCIPLES

Chapter 17 | Treasury Capital Principles

- Capital Preservation | Capital Security.
- Liquidity | Maintain necessary liquidity.
- Risk Diversification | Risk diversification.
- Capital Efficiency | Capital Efficiency.
- Strategic Alignment | Align with Froggie's ecosystem development strategy.

SAFETY > LIQUIDITY > YIELD

Profits shall not take precedence over the security of public capital.

CHAPTER 18 / RISK MANAGEMENT

Chapter 18 | Risk Management

Froggie DAO Treasury has established a continuous risk identification, assessment, mitigation, and review framework to identify the following risks: Market Risk, Liquidity Risk, Smart Contract Risk, Protocol Risk, Counterparty Risk, Governance Risk, Operational Risk, and Key Management Risk.

Treasury & Risk shall establish a risk register, define key risk thresholds, conduct execution reviews, and prepare risk reports; additionally, it shall set specific risk control requirements for external agreements, fund aggregation, fee allocation agreements, and NFT rights systems.

CHAPTER 19 / PROTOCOL DUE DILIGENCE

Chapter 19 | Protocol & On-Chain Capital Management

Subject to governance approval, the treasury may leverage qualified on-chain infrastructure that has undergone risk assessment to enhance the efficiency of public capital. External protocol integration must comply with the following requirements: due diligence, code or security review, risk assessment, governance approval, definition of funding limits, and ongoing monitoring.

The yield rate shall not be used solely as the basis for allocating public capital, nor shall core assets be concentrated without limit within a single agreement, a single asset, or a single risk exposure.

Protocol Due Diligence → Security Review → Risk Assessment → Governance Approval → Capital Limit → Monitoring

CHAPTER 20 / CONCENTRATION LIMITS

Chapter 20 | Concentration Limits

The treasury shall establish upper limits for: the risk exposure of a single asset, the risk exposure of a single agreement, the exposure of a single liquidity pool, the access limits for a single execution address, and the aggregate allocation limit for high-risk assets.

All parameters are determined based on the development stage and market environment of Froggie DAO, then incorporated into the Treasury Policy via governance procedures, and subsequently integrated into the risk dashboard and anomaly alert mechanisms.

CHAPTER 21 / TREASURY RESERVE

Chapter 21 | Treasury Reserve

The Treasury Reserve serves the core operations of the DAO, addresses major security incidents, meets market liquidity needs, supports long-term ecosystem development, and provides strategic opportunities to secure governance approvals. In principle, the Treasury Reserve does not engage in high-risk capital strategies; instead, it prioritizes ensuring business continuity and protecting the legitimate rights and interests of its members.

DAO LIQUIDITY + DAO SECURITY + DAO CONTINUITY

CHAPTER 22 / TREASURY BUDGET

Chapter 22 | Treasury Budget

When utilizing shared assets, each execution team of Froggie DAO must follow the budgeting framework to submit, review, approve, allocate, execute, and report on its requests. The application documents must clearly specify the intended use of funds, the asset amount, the duration, the responsible person, measurable objectives, and expected implementation outcomes.

Budget allocations shall not be altered without authorization; funds remaining unused upon termination or completion of a project shall, in principle, be returned to the public treasury, and the implementation reports shall be disclosed in accordance with the on-chain transaction records.

Budget Proposal → Review → Approval → Allocation → Execution → Report

CHAPTER 23 / EMERGENCY TREASURY PROTECTION

Chapter 23 | Emergency Treasury Protection

Emergency Treasury Protection shall be activated in the event of a material contractual vulnerability, protocol attack, key leakage, abnormal asset transfer, severe liquidity risk, or any other incident that could jeopardize the public assets of the Treasury.

Emergency authority shall be used exclusively to protect assets and mitigate losses; it shall not be used to establish new capital strategies, alter existing benefit distribution rules, or replace normal governance in the long term. All emergency actions shall be assigned an incident number, documented in an execution record, and subject to a subsequent Governance Review.

FROGGIE DAO / GOVERNANCE FRAMEWORK

PART 05

Transparent Disclosure and Institutional Oversight

Ensure that assets are verifiable, decisions are traceable, and execution is auditable, thereby preventing conflicts of interest and overstepping of authority.

TRANSPARENCY & OVERSIGHT

CHAPTER 24 / TREASURY TRANSPARENCY

Chapter 24 | Treasury Transparency Framework

Froggie DAO Treasury has established an externally accessible, continuously updated information system to disclose the treasury address, asset balances, asset structure, core multi-signature structure, significant asset flows, treasury governance proposals, budget execution status, contractual risk exposure, material risk events, as well as key governance and operational records.

The Genesis NFT identity system additionally discloses the minting supply, the utilization status of various access tiers, valid eligibility criteria, the total amount of transaction fees collected, the allocation pool ratios, the status of claim or distribution, and irreversible historical settlement records.

Assets Verifiable. Decisions Traceable. Execution Auditable.

Assets are verifiable, decisions are traceable, and execution is auditable.

CHAPTER 25 / TREASURY REPORT

Chapter 25 | Treasury Report

The Treasury Report includes total asset size, asset composition, changes in assets, capital allocation, revenue and expenditures, contractual risk exposure, major governance initiatives, and changes in multi-signature authority.

The Genesis NFT report details G1–G5 identity supply, grant entitlement fulfillment, order quota entitlement utilization, transaction fee pool accounts, eligibility criteria, and distribution results. Each report is based on a specific settlement period and does not combine revenue, treasury reserves, and outstanding entitlement balances.

CHAPTER 26 / CONFLICT OF INTEREST

Chapter 26 | Conflict of Interest

Members participating in treasury governance shall proactively disclose any material interest relationships with counterparties, assets, agreements, or ecosystem cooperation projects; where such direct material interest relationships exist, they shall abstain from relevant deliberations or voting in accordance with the Conflict of Interest Policy.

No person shall, through affiliated wallets, affiliated entities, internal settlement mechanisms, or undisclosed identity relationships, improperly transfer public funds or fee-related benefits to themselves or their affiliated parties.

CHAPTER 27 / PROHIBITED CONDUCT

Chapter 27 | Prohibited Conduct

- Transfer of major public assets without proper authorization, or the independent control of core treasury funds by any individual.
- Avoid conducting major asset transactions by circumventing multiple approvals, time locks, or formal governance procedures.
- Capital strategies involving high leverage, unlimited loss exposure, or the absence of clearly defined risk boundaries, utilizing public assets without prior approval.
- Using public treasury funds for personal debt guarantees or for undisclosed transfers of benefits to affiliated parties.
- Fabricating treasury balances, fee income, NFT holder identities, order performance metrics, or settlement reports.
- Misuse of Genesis Ambassador referral relationships, falsification of team performance metrics, circular transactions, or multi-account manipulation to secure distribution eligibility.
- Concealing material asset losses, key-related incidents, or exploiting undisclosed governance information to seek personal gain.

Material violations shall be subject to a DAO Governance Investigation, and investigations, reviews, and accountability measures shall be conducted in accordance with applicable laws and publicly disclosed community governance rules.

CHAPTER 28 / TREASURY & DAO GOVERNANCE

Chapter 28 | Treasury & DAO Governance: Governance Synergy

The Froggie DAO Treasury is integrated into the unified DAO Governance framework. DAO Governance determines how public capital should serve Meme Studio, Froggie ID, Global Guild, Froggie World, community operations, and long-term strategy; the Treasury, in turn, translates authorized resolutions into verifiable on-chain capital actions.

Genesis NFT provides community members with tiered participation identities; G4 and G5 hold broader eligibility for participation in treasury governance, although specific decision-making remains subject to voting rules, conflict-of-interest constraints, and multi-signature and auditing mechanisms.

Community → Governance → Treasury Authorization → Execution → Transparency → Oversight

FROGGIE DAO / GOVERNANCE FRAMEWORK

PART 06

Ecological Growth and the Evolution of Long-Term Governance

Integrate cultural consensus, community development, and capital governance with long-term brand development.

GROWTH & GOVERNANCE EVOLUTION

CHAPTER 29 / TREASURY FLYWHEEL

Chapter 29 | Treasury Flywheel

The long-term capital cycle of Froggie DAO Treasury synergizes with Froggie's cultural brand ecosystem development: global community expansion generates richer content, users, and commercial opportunities; real-world operations generate compliant operating revenue; governance-approved asset management ensures treasury security and operational capabilities; and capital deployment supports the development of ecosystem products and the brand itself.

The core of the treasury growth flywheel lies in maintaining a sustained balance among capital security, capital efficiency, ecological delivery, and long-term reserves. The allocation of handling fees and treasury reserves must be clearly accounted for, ensuring that the obligations associated with identity-based dividends are not conflated with public assets.

Community Growth → Ecosystem Revenue → Treasury Management → Product Development → Value Creation → Community Growth

CHAPTER 30 / TREASURY GOVERNANCE EVOLUTION

Chapter 30 | Evolution of Treasury Governance

stage	Key Areas of Focus	Deliverables
Phase I | Genesis Treasury	Creation Identity and Treasury Activation	Genesis NFT rules, treasury address, participation records, initial multi-signature requirements, and risk management mechanisms.
Phase II | Governed Treasury	Comprehensive issue governance	TGP, governance voting, multi-signature authorization, time lock, periodic audits, and disclosure of transaction fee settlements.
Phase III | On-Chain Treasury	Rule-driven on-chain execution	Additional standardized governance parameters, smart contract execution, and on-chain auditing.

Froggie DAO has long been driving the transition of treasury management from manual authorization to more verifiable, institutionalized on-chain governance, enabling the community to verify the complete operational pathways of capital and equity.

Proposal → Vote → TimeLock → Smart Contract Execution → On-Chain Audit

CHAPTER 31 / TREASURY GOVERNANCE DECLARATION

Chapter 31 | Treasury Governance Declaration

Froggie DAO Treasury constitutes the public capital infrastructure of Froggie DAO. The Genesis Treasury is gradually built up through legitimate public contributions from early community members and operates under a governance framework and on-chain auditing mechanism. The Genesis NFT records the identity of the founding community along with its corresponding rule-based rights and interests, but does not grant individual ownership rights to the public assets of the treasury.

- No person shall appropriate the public treasury for personal use.
- No creation-based identity may inherently override the state treasury governance framework.
- No rights, interests, or public contributions shall automatically confer ownership of the treasury.
- Any significant asset transaction must be subject to explicit authorization.
- Any exercise of governance authority must be subject to institutional and conflict-of-interest rules.
- Any allocation of handling fees must specify clear fee rates, applicable pools, and auditable settlement records.
- Any significant treasury execution result must be verifiable by the community.

DAO Owns. Governance Decides. Treasury Manages. Multisig Executes. Community Verifies.

FROGGIE DAO — BUILDING TRANSPARENT COMMUNITY CAPITAL INFRASTRUCTURE.

PART 07

Appendix and Execution Parameters

Consolidate creation rights, settlement formulas, and institutional parameters to facilitate project operation, legal review, and smart contract implementation.

APPENDICES & OPERATING DEFINITIONS

Appendix A | Genesis NFT Genesis Identity Rights Overview Table

rank	Participation / Eligibility Criteria	Gift Benefits	Credit Limit / Processing Fee	Scope of Governance
G1	100 U	1% equivalent FROGGIE	—	DAO Genesis Identity
G2	500 U / 1,000 seats	2% equivalent FROGGIE	2× order limit; shared 1% transaction fee pool	DAOadminister
G3	1,000 units / 500 seats	3% equivalent to FROGGIE	2× order limit; shared 1% transaction fee pool	DAO Governance & Ecosystem Co-Construction
G4	3,000 units / 199 seats	5% equivalent FROGGIE	2× order limit; shared 1% transaction fee pool	DAO governance and Treasury participation
G5	Recommended: 10 G4 / Not available for direct purchase	Genesis Ambassador NFT	Share a 2% transaction fee pool	DAO core governance, Treasury strategic governance

Appendix B | Definitions for Fee Allocation Calculations

Let F denote the total valid transaction fee across the entire network actually included under the specified settlement period, and p denote the collection ratio of the Ambassador dividend pool; then $A = F \times p$ represents the Ambassador allocation pool. The network-wide weighted portion = $A \times 20\%$; the team performance portion = $A \times 80\%$.

For each ambassador i, let w_i denote the effective global network allocation weight, and W denote the sum of the weights of all valid ambassadors; let v_i denote the effective team performance of ambassador i, and V denote the total effective team performance across the entire network: the global network weighted share for a member = $A \times 20\% \times w_i / W$; the team performance share for a member = $A \times 80\% \times v_i / V$.

When W or V is 0, the current transaction fee is 0, a transaction cancellation occurs, or it is necessary to deduct non-compliant orders, the settlement system shall apply the publicly disclosed abnormal handling and deferred settlement rules, and shall not perform zero-denominator calculations.

Given parameters	20% rate example	2% Rate Example
Effective transaction fee across the entire network: F	100 BNB	100 BNB
Ambassador pool proportion p	20%	2%

Ambassador Main Allocation Pool A	20 BNB	2 BNB
Global weighted average: 20%	4 BNB	0.4 BNB
Team performance: 80%	16 BNB	1.6 BNB

Appendix C | Key Definitions and Formal Implementation Documents

Terms / Documents	act on
U	The settlement and accounting unit for Genesis participation values; the accepted currencies, exchange rates, and payment networks shall be disclosed in accordance with the official activity rules.
Genesis NFT	On-chain identity credentials issued under the G1–G5 grading scheme, along with their corresponding rule-based rights carriers.
FROGGIE	Froggie is a community-based on-chain token; its issuance, conversion, and transfer shall be recorded in publicly accessible smart contracts.
Genesis Participation Rules	Eligibility criteria for participants at all levels, quota allocations, quota utilization, recommendation attribution, revocation of eligibility, and NFT delivery rules.
Genesis Benefits Policy	Equivalent value calculation criteria, order quota definitions, governance eligibility, and conditions for entitlement fulfillment.
Fee Pool & Settlement Rules	Fee calculation basis, 2% / 20% option, G2–G4 1% pool relationships, snapshots, weighting, team performance and settlement.
Treasury Governance Framework	Public asset ownership, TGP, governance weighting, separation of powers, multi-signature, and time lock.
Treasury Policy	Asset classification, allocation ratios, capital limits, reserve standards, and risk early warning mechanisms.
Disclosure & Audit Standard	Format and frequency of public reports on the treasury, NFTs, transaction fee pools, and governance proposals.

On-chain identity and asset-based information

FROGGIE Token Network: BNB Smart Chain (BEP-20). Public contract address: 0xA45F5EB48CeCd034751651aeeda6271Bd5df8888. The Genesis NFT contract address, the multi-signature address for the Treasury, and the fee settlement address shall be disclosed in the official deployment announcement and the public data center, respectively.

Responsibility and the Scope of Application

This white paper serves as a description of project governance and identity rights mechanisms; it does not constitute a guarantee of returns, fixed returns, or any commitment regarding token prices. The allocation of transaction fees is subject to the following prerequisites: actual aggregated data, valid eligibility criteria, a unified formula, and applicable law. DAO treasury assets may be subject to market, liquidity, protocol, smart contract, and execution risks. Any promotional claims inconsistent with this document shall not substitute for formal governance resolutions, contract rules, or disclosures.
