FROGGIE / Electric Frog

FROGGIE DAO

Genesis Governance White Paper

GENESIS GOVERNANCE WHITEPAPER V1.0

CONTRIBUTION · RESPONSIBILITY · RULES · TRANSPARENCY

Eligibility for Contribution · Defining Responsibilities for Governance · Regulating Power Through Rules · Building Consensus via Transparency

VERSION 1.0 | OCTOBER 2026

CHAPTER 01 / VISION AND MISSION

Chapter 1 | Vision and Mission

1.1 Vision | Vision

Establish a long-term autonomous global Froggie community network in which participants collectively engage, whereby governance eligibility is earned through genuine contributions, governance authority is constrained by institutionalized rules, and identity, voting, and execution outcomes are verified via on-chain data. Community members, content creators, ecosystem developers, and global regional organizers together form the governance foundation of the Froggie DAO.

1.2 Mission | Mission

Froggie DAO transforms cultural identity into community collaboration capabilities, converts verifiable long-term contributions into organizational credibility, and drives the development of the global Meme ecosystem through formal proposals, public voting, professional execution, and continuous oversight. Its governance framework supports original content, digital identities, interactive products, community co-creation, and ecosystem commercial partnerships.

Personal Credit → Institutional Credit → Institutional Credit → On-chain Verification → Genesis Governance → Community Autonomy

CHAPTER 02 / CORE GOVERNANCE PRINCIPLES

Chapter 2 | Fundamental Principles of Governance

principle	System Definition
Contribution Creates Qualification | Contribution Creates Qualification	Governance eligibility is tied to ongoing, authentic, and verifiable contributions; the creation of NFTs and community rank levels are recorded according to their respective rules, but neither automatically grants governance committee seats.
Responsibility Defines Governance	Governance authority shall be aligned with duty performance responsibilities, term-based performance evaluations, disclosure requirements, and community oversight.
Rules Restrict Power | Rules Limit Power	The authorities of all individuals, committees, and executive bodies shall have clearly defined sources, boundaries, terms of office, and mechanisms for withdrawal or exit.
Transparency Builds Consensus | Transparency Builds Consensus	Major proposals, votes, authorizations, financial matters, and implementation outcomes shall be documented in a publicly accessible, verifiable, and accountable record.

CHAPTER 03 / DAO GOVERNANCE STRUCTURE

Chapter 3 | Froggie DAO Organizational Structure

Froggie DAO establishes an organizational framework that integrates Genesis identity, Community organization, Formal Governance, Professional Execution, and On-Chain Infrastructure for governance. During the genesis phase, it completes the first round of institutional and governance structure development, while progressively opening long-term governance capabilities to the community.

GENESIS / G1—G5 → COMMUNITY / F1—F5 → GOVERNANCE → EXECUTION → ON-CHAIN

top class	core content
GENESIS	G1–G5 Genesis NFT: Early-stage identity, rights and benefits records, and eligibility for tiered governance participation
COMMUNITY	F1–F5 Long-term Community Rank: Sustained Contribution, Reputation, and Regional Organizational Responsibility
GOVERNANCE	Governance Qualification → Candidate Nomination/Proposal → Voting → Governance Council
EXECUTION	Community / Treasury & Risk / Ecosystem & Strategy / Technology & Security / Brand & Operations
ON-CHAIN	Identity / Reputation / Proposal / Voting / Multisig / TimeLock / Public Record

CHAPTER 04 / GENESIS MEMBERSHIP AND NFT

Chapter 4 | Genesis Members & Genesis NFT: Genesis Identity

Froggie DAO has established an on-chain genesis identity system for its first global cohort of community members during the Genesis Phase. The historical identities of genesis members are continuously recorded once their issuance complies with predefined rules and has been confirmed; entitlements at all levels are granted in accordance with publicly disclosed identity criteria, product launch status, and settlement mechanisms. The Genesis NFT serves as an identity credential and a token of specific ecosystem entitlements, but it does not represent private ownership of treasury assets.

4.1 Creation Identity Levels and Participation Criteria

grade	Identity Name	Eligibility Criteria	issuing authority note
G1	Genesis Member / Genesis Member	100 U	Open according to identity rules
G2	Genesis Builder	500 U	Limited to 1,000 seats worldwide
G3	Genesis Partner / Genesis Partner	1,000 U	Limited to 500 seats worldwide
G4	Genesis Core / Members of the Genesis Core	3,000 U	Limited to 199 seats worldwide
G5	Genesis Ambassador	Top 10 Recommendations for Genesis Core	Cannot be purchased directly

4.2 G1-G5 Identity and Rights

grade	Composition of Equity
G1	Genesis Member NFT; 1% equivalent FROGGIE creation bonus; DAO creation identity
G2	Genesis Builder NFT; 2% equivalent FROGGIE launch bonus entitlements; 2x order limit after DAO launch; shared 1% transaction fee dividend pool; DAO governance participation rights
G3	Genesis Partner NFT; 3% equivalent FROGGIE launch bonus entitlements; 2× order quota upon DAO launch;

grade	Composition of Equity
	shared 1% transaction fee dividend pool; DAO governance participation rights and access to core ecosystem co-creation opportunities
G4	Genesis Core NFT; 5% equivalent FROGGIE launch bonus entitlements; 2× order quota upon DAO launch; shared 1% transaction fee dividend pool; DAO governance voting rights and Treasury governance voting rights
G5	Genesis Ambassador NFT; shared 2% transaction fee dividend pool; DAO core governance participation rights, Treasury strategic governance participation rights, and eligibility for major ecosystem collaborations with the global community

4.3 Boundaries of Stakeholder Governance

G2–G5 holders are granted DAO governance rights—including participation in discussions, proposal submission, and voting—consistent with their respective identity tiers; the Treasury governance rights of G4 and G5 holders encompass topic deliberation, submission of opinions, and formally authorized governance actions. Holding an NFT does not automatically grant any tier membership in the Nine-Seat Governance Committee, nor does it enable independent control of Treasury funds or confer individual ownership of DAO public assets.

The pricing currency, benchmark price, calculation period, wallet delivery method, and release mechanism for the "Equivalent FROGGIE Genesis Grant Benefits" (1%–5%), as well as the order category, benchmark criteria, and applicable scope of the "2× Order Limit" offer, shall be fixed and disclosed in the respective campaign and product policy documents. Identity history records and specific benefit eligibility shall be managed separately.

4.4 Fee Allocation Structure and Example

G2, G3, and G4 share a 1% transaction fee dividend pool; G5 shares a 2% transaction fee dividend pool. The allocation for Genesis Ambassadors is determined by a 20% global network weighting and an 80% team-based effective performance weighting: the global network weighting share is allocated based on identity or effective weighting; the team weighting share is allocated based on the proportion of the individual team's effective performance relative to the total effective team performance across the global network.

Ambassador's individual share = Ambassador pool × 20% × (individual valid weight / total network valid weight) + Ambassador pool × 80% × (individual team's valid performance / total network's valid team performance)

Example of transaction fees for 100 BNB: Under the "G5 Total Pool: 20% of total network transaction fees" calculation method, the Ambassador Pool equals 20 BNB, consisting of 4 BNB weighted by the entire network and 16 BNB weighted by team performance. Under the "G5 Shared 2% Transaction Fee Distribution Pool" terminology, the Ambassador Pool equals 2 BNB, consisting of 0.4 BNB weighted by the entire network and 1.6 BNB weighted by team performance.

Key valuation criteria: The previously provided G5 textual rule stated "shared 2% transaction fee dividend pool," whereas in the 100 BNB case study, the calculation was based on a 20% total pool; these two approaches are inconsistent. This document faithfully retains both sets of inputs and applies distinct calculations, without forcing them to be standardized; prior to the formal activation of automated settlement, a single, definitive valuation criterion shall be established based on official identity verification and detailed transaction fee guidelines.

The eligible identities, valid performance assessments, relationships among the 1% fee pools of different tiers, settlement cycles, fee currencies, definition of net transaction fees, deduction of invalid orders, and on-chain verification mechanisms—all of which are subject to weighting—are explicitly set forth in the official settlement rules and execution records. Participation in this equity scheme does not constitute a commitment to fixed or guaranteed returns.

CHAPTER 05 / COMMUNITY RANK

Chapter 5 | F1-F5 Community Rank: Long-term Community Tier

Froggie DAO has established a long-term community rank system (F1–F5) that is independent of the Genesis NFT. G1–G5 record Genesis identity and associated entitlements, while F1–F5 record community organizational roles, long-term contributions, and reputation tiers; following the conclusion of the Genesis phase, this long-term community rank system will continue to operate.

class of position	status	Role Definition
F1	Froggie Member / Community Member	Community activities, public discussions, and basic governance education
F2	Froggie Builder / Community Builder	Content dissemination, community collaboration, event organization
F3	Froggie Ambassador / Community Ambassador	Core community organization, member coordination, community representatives
F4	Froggie Regional Leader	Regional development, cultivation of contributors, and coordination of community governance
F5	Froggie Global Leader	Cross-regional development, organization of strategic initiatives, and coordination of global communities

F3 Froggie Ambassador is a long-term community rank, whereas G5 Genesis Ambassador is a Genesis NFT identity; these two statuses are distinct and cannot be automatically substituted for one another.

CHAPTER 06 / RANK PROMOTION

Chapter 6 | Community Rank Promotion Mechanism

Long-term community tier assignments are not determined by a single funding scale. Froggie DAO conducts tier evaluations by comprehensively assessing Community Contribution, Ecosystem Contribution, Reputation, and Governance Participation, in conjunction with effective outputs, public services, event operations, community cultivation, technical contributions, and a record of sustained service performance.

Actual Contribution → Public Record → Long-term Reputation → Rank Review → Organizational Accountability

Ranking promotions shall be based on consistent performance, public evaluations, and formal reviews. Malicious data manipulation, fake users, invalid team data, and undisclosed related-party transactions shall not be recognized as positive contributions. Member rankings may be adjusted based on the performance of duties and any violations committed.

CHAPTER 07 / COMMUNITY PRIVILEGES

Chapter 7 | Rights and Responsibilities of Community Organizations

grade	Organizational Authority and Responsibilities
F1	Community engagement, public governance discussions, access to basic information, and governance

grade	Organizational Authority and Responsibilities
	recommendations
F2	Leverage F1 to initiate community development initiatives and activities, and propose community-related agenda items.
F3	Build core communities and organize regional activities based on the F2 framework, serve as a community representative, and secure formal joint proposal signatures as well as eligibility for member referrals.
F4	Establish regional networks based on F3, identify regional issues, submit resource requests, and recommend candidate governance entities.
F5	Building upon the F4 framework, coordinate cross-regional efforts, initiate global community initiatives, propose major governance proposals, and participate in strategic discussions.

F1–F5 denote the responsibilities and collaborative authorities of community organizations; however, they do not automatically confer formal voting rights within the governance committee. Formal governance positions shall be filled through an independent qualification process, open nomination, and a confirmation procedure.

CHAPTER 08 / GOVERNANCE QUALIFICATION

Chapter 8 | Governance Qualification

Community rank, Genesis NFT identity, and formal governance rights are distinct concepts. Eligibility to participate in governance for G2–G5 is determined based on their publicly disclosed identity rights; however, to hold formal governance roles—such as serving as a member of the Governance Council—one must still demonstrate verifiable contribution records, relevant professional expertise, disclosure of any conflicts of interest, and complete the formal nomination, review, and governance approval processes.

Community Participation → Contributions & Reputation → Governance Eligibility → Candidate Nomination → Public Vote → Formal Appointment

Possessing a Genesis Identity grants a permanent governance position; possessing a community rank automatically grants control over treasury assets.

CHAPTER 09 / GENESIS GOVERNANCE COUNCIL

Chapter 9 | Genesis Governance Council

During its genesis phase, Froggie DAO established its first Genesis Governance Council, comprising nine governance seats, with an initial term of 12 months. Serving as a transitional governance body, the council is responsible for refining the genesis framework, organizational structure, community governance capabilities, and on-chain infrastructure, while facilitating the transition toward long-term community self-governance.

9 GOVERNANCE SEATS / 12-MONTH INITIAL TERM

The scope of responsibilities for the inaugural Committee shall be defined by the DAO's formal governance charter. Neither the creation history, capital participation, or community influence shall be construed as granting automatic committee seats.

CHAPTER 10 / COUNCIL STRUCTURE

Chapter 10 | Council: Organizational Structure of the Governance Committee

Area of governance	seat	key responsibilities
Community Governance	3	Global Community Governance, Regional Organizations, Community Rules, and Public Collaboration
Treasury & Risk	2	Supervision of public assets, risk policies, and review of major treasury matters
Ecosystem & Strategy	2	Long-term ecological strategy, development of cultural products, major partnerships, and strategic coordination
Technology & Security	1	On-chain governance, smart contracts, technical architecture, security governance
Brand & Operations	1	Brand, Operations, Global Communications, and Governance Disclosures

3 + 2 + 2 + 1 + 1 = 9 Genesis Governance Seats

CHAPTER 11 / COUNCIL APPOINTMENT

Chapter 11 | Election of Governance Members

Contribution Record → Eligibility Review → Public Nomination → Conflict of Interest Disclosure → Governance Confirmation

Candidate members for governance shall possess verifiable ecological contributions, professional expertise in the designated governance domain, the capacity to consistently fulfill their duties, and necessary disclosures regarding related interests. Committee members shall be appointed in accordance with the public selection procedures set forth in the Articles of Association; no individual may automatically secure a seat based solely on capital size, Genesis NFT holdings, F1–F5 rank, or personal influence.

Governance seats entail Authority, Responsibility, and Accountability—namely, the clarification of power, the assumption of responsibility, and the acceptance of accountability. Essential governance information regarding candidates shall be disclosed to the community prior to formal confirmation.

CHAPTER 12 / GOVERNANCE IDENTITY

Chapter 12 | Governance Identity: Official Governance Identity

The formal committee and other approved governance roles acquire a Governance Identity, which records the role, governance domain, tenure, authorizations, proposals, voting history, and performance history of the role. Genesis Identity, F-Rank Identity, and Governance Identity constitute three independent yet cross-verifiable identity records.

Identity System	act on	Permission boundaries
Genesis Identity / NFT	Genesis History and Hierarchical Rights and Interests	Not automatically acquire seats on the governance committee or ownership of the treasury.
F-Rank Identity	Current community rank and long-term contributions	Does not automatically create formal governance positions.
Governance Identity	Formal Governance Roles and Authorization History	Upon expiration of the term, the role and associated permissions will cease to be valid, while historical records will be retained.

The governance identity shall, in principle, not be freely transferable; upon change of governance role or expiration of the term of office, the relevant authorization and signing privileges shall be revoked simultaneously, while historical records shall be retained for audit purposes.

CHAPTER 13 / COUNCIL AUTHORITY

Chapter 13 | Responsibilities and Authorities of the Creation Governance Committee

Permission domain	explain
Strategic Governance	Review the medium-to long-term development of the DAO, the strategic direction of its original IP ecosystem, major commercial collaborations, and global market initiatives.
Governance Rulemaking	Propose, deliberate on, and revise the DAO's organizational structure, identities, voting mechanisms, and governance frameworks.
Treasury Oversight	Supervise treasury policies, budgets, risks, and asset security; supervisory authority does not equate to individual discretion.
Executive Oversight	Supervise the executive agency in implementing the formal resolution, and monitor progress, budgeting, and disclosure results.
Emergency Governance	Implement time-limited protective measures in accordance with emergency response protocols in the event of major contractual, treasury, or system security incidents.

Emergency governance powers must be subject to clear authorization sources, defined scopes of application, specified durations of validity, and established procedures for information disclosure and ex-post review; they shall not serve as long-term tools to circumvent normal DAO governance mechanisms.

CHAPTER 14 / SEPARATION OF POWERS

Chapter 14 | Separation of Powers and Asset Enforcement

Proposal → Approval → Execution

The proposal, approval, and execution of major governance actions shall be decoupled; no single member may independently complete the full decision-making process for major matters. Matters involving public assets shall further adhere to a control chain comprising formal resolutions, authorizations, multi-signatures and time locks, on-chain execution, and public records.

Governance Decision → Execution Authorization → Multisig / TimeLock → Execution → Public Record

The Committee oversees the Treasury but does not hold individual property rights over the public assets of the Treasury; NFT rights do not alter the ownership of such public assets.

CHAPTER 15 / GOVERNANCE PROPOSAL

Chapter 15 | FIP | Froggie Improvement Proposal

Froggie DAO has transformed the original MIP framework into the FIP | Froggie Improvement Proposal, establishing it as the formal standard for governance proposals. The FIP outlines a complete workflow—from concept development and community discussion, through formal proposal submission, governance review, voting, implementation, and public record-keeping.

Idea → Community Discussion → FIP → Governance Review → Voting → Execution → Public Record

A formal proposal must clearly specify the background, objectives, implementation plan, scope of impact, resource requirements, risk assessment, execution timeline, designated responsible persons, and the on-chain actions to be triggered. For significant adjustments involving transaction fee allocations, NFT issuance rules, or the DAO treasury and permission structures, the appropriate approval procedures must be followed according to the corresponding governance tier.

CHAPTER 16 / GOVERNANCE LEVELS

Chapter 16 | Tiered Governance of Matters

Governance level	Scope and Review Requirements
Level I Operational Governance	Routine community operations, routine activities, and matters covered by the approved budget
Level II Major Governance	Key ecological cooperation initiatives, major budget adjustments, revisions to fee regimes, amendments to key identity-related rights and benefits regulations, and

Governance level	Scope and Review Requirements
	significant public asset matters
Level III: Fundamental Governance	DAO core governance architecture, public asset regime, boundaries of committee authority, long-term constitutional foundations, and allocation of key powers

The higher the governance tier, the greater the required duration of public discussion, the broader the eligible participant scope, the higher the voting threshold, the longer the execution latency, and the stricter the audit and verification requirements. The specific thresholds, quorum requirements, and time-lock parameters are defined in the formal Governance Policy and Treasury Policy.

CHAPTER 17 / EXECUTION LAYER

Chapter 17 | Execution Layer: Professional Execution Architecture

Governance Decides. Execution Executes. Community Supervises.

Performing functions	operating duty
Community Governance	Implementation of global community building, regional organizations, and governance affairs
Treasury & Risk	Authorized management of public assets, risk control, and related implementation activities following remediation efforts
Ecosystem & Strategy	Ecological products, strategic partnerships, and commercial resource matchmaking
Technology & Security	Smart contracts, on-chain governance infrastructure, and network and information security
Brand & Operations	Brand content, customer service, offline events, daily operations, and information disclosure

An executive position does not automatically confer additional governance voting rights based on administrative responsibilities. Any executive action involving asset allocation, agreement-based integration, or changes to access permissions must be subject to prior authorization.

CHAPTER 18 / CONFLICT AND DISCIPLINE

Chapter 18 | Conflicts of Interest and Governance Discipline

All members of the governance body shall proactively disclose material matters relating to themselves, their affiliated wallets, affiliated companies, projects, or other direct economic interests. Members who face material conflicts of interest shall withdraw from the relevant deliberation and voting procedures in accordance with the recusal rules.

Any act—including the unauthorized transfer of public assets, concealment of related interests, leveraging governance roles to facilitate the transfer of benefits, malicious manipulation of governance outcomes, falsification of data, abuse of community membership rights, or serious violations of governance rules—shall constitute a matter subject to a governance investigation.

Following such an investigation, appropriate measures may be taken in accordance with established procedures, including authorized asset freezes, suspension of official duties, removal from governance positions, and other relevant actions.

CHAPTER 19 / TERMS AND SUCCESSION

Chapter 19 | Tenure, Resignation, Impeachment, and Succession

The first term of the Governance Committee shall last 12 months, and the formal governance positions are not permanent appointments. Grounds for resignation include voluntary resignation, expiration of the term, resignation due to dereliction of duty, or removal from governance. Committee members who are absent from major governance matters without justifiable cause for three consecutive terms shall undergo a Governance Performance Review.

Public Nomination → Interest Disclosure → Voting Confirmation → Seat Replacement

Upon the emergence of a vacancy in a governance seat, the candidate nomination, disclosure, voting, and replacement shall be conducted in accordance with established formal procedures. In principle, the replacement member shall assume the remaining term of the respective seat; the governance authority of the original member shall be simultaneously revoked, while their historical record of performance shall be preserved.

CHAPTER 20 / IDENTITY AND REPUTATION

Chapter 20 | On-chain Identity and Reputation

Froggie DAO integrates creator NFT identities, F1–F5 community tier levels, governance roles, and long-term reputation into a unified, interlinked digital identity framework. On-chain historical records may include content creation, community activities, public proposals, governance voting, technical contributions, strategic contributions, and officially recognized public services.

data object	main application
Genesis Identity / NFT	Record the creation identity, level, and entitlement qualifications of G1–G5.
F-Rank Identity	Document the current community rank levels (F1–F5) and regional organizational responsibilities.
Governance Identity	Record the governance position, tenure, professional domain, and role authorizations.
Reputation / Contribution Record	Document long-term public contributions, governance track record, and reputation assessments.

Reputation should be derived from continuous, authentic, and auditable contributions, rather than being determined solely by the amount of a single transaction. For NFT transactions or identity changes, the validity of permissions should be recorded to prevent confusion between an individual's identity history and non-transferable governance rights.

CHAPTER 21 / ON-CHAIN GOVERNANCE INFRASTRUCTURE

Chapter 21 | On-chain Governance Infrastructure

The governance infrastructure of Froggie DAO is deployed progressively, based on the maturity of its governance framework. During the genesis phase, priority is given to implementing identity management, formal proposals, voting, multi-signature mechanisms, and public records; in the governance upgrade phase, Reputation, delegated voting, and TimeLock are added; once fully mature, smart contracts are gradually deployed to execute standardized resolutions.

Identity + Proposal + Voting + Multisig + Public Record → Reputation + Delegation + TimeLock → Proposal → Vote → Queue → TimeLock → Execution

All management interfaces, contract administrators, and multi-signature roles must be governed by formal governance frameworks; no technical tools, administrator addresses, or control over smart contracts may override the authority granted by such frameworks.

CHAPTER 22 / GOVERNANCE TRANSPARENCY

Chapter 22 | Governance Transparency and Information Disclosure

DAOs shall regularly disclose the following information: governance members and their terms of office; governance wallets; formal FIPs; voting outcomes; major governance decisions; related-party interests; changes in committee seats; asset-related authorizations; and key execution outcomes. For data pertaining to Genesis NFT distribution, fee collection, and settlement, verifiable on-chain records and applicable settlement guidelines shall be retained.

Transparent Objectives	content

Transparent Objectives	content
Decision Traceability	Decision traceability: The background of the proposal, feedback, public notice, voting, and approval process are all searchable.
Authority Verifiability	Authorization verifiability: The identity of the committee, the signatories, and the source and effective duration of the contract authorization are clearly defined.
Execution Accountability	Accountability: Funds, delivery, timelines, and handling of anomalies are verifiable.

CHAPTER 23 / INCENTIVES AND GENESIS BENEFITS

Chapter 23 | Governance Incentive Principles and Foundational Rights

The G1–G5 identity entitlements established during the genesis phase shall be enforced in accordance with the Genesis NFT identity rules, encompassing equivalent FROGGIE genesis grant entitlements, eligible quota allocations, eligibility to participate in the transaction fee dividend pool, and governance participation rights. These entitlements are linked to the genesis history identity, subject to applicable asset criteria, product requirements, valid identity status, and a public settlement mechanism; they do not constitute promises of future income or fixed income guarantees.

In addition to the rights and interests already specified in the official creation identity framework, Froggie DAO does not, by default, grant additional fixed dividends, perpetual yields, or guaranteed minimum returns for F1–F5 community rank levels or positions within the governance committee. Any subsequent new incentive mechanisms, pool allocations, or weight adjustments shall be reviewed, publicly disclosed, and implemented by the community in accordance with FIP and relevant treasury procedures.

Contribution Before Reward / Governance Before Distribution / Transparency Before Execution

CHAPTER 24 / FROM GENESIS TO COMMUNITY

Chapter 24 | From Creation Governance to Community Governance

The Genesis Governance Council serves as a transitional governance body. During its inaugural 12-month term, its primary focus was to establish a DAO framework, an organizational network, governance infrastructure, transparent disclosure mechanisms, and community self-governance capabilities. As the F1–F5 role hierarchy, long-term contribution records, and effective community participation gradually matured, the governance authority has progressively shifted toward a long-term self-governance mechanism that integrates community nominations, contribution credibility, and open voting.

Genesis Phase → Genesis Council → F1—F5 Community → Contribution & Reputation → Community Governance → On-Chain Governance

The transition process must ensure the security of the state treasury, the continuity of historical archives, the protection of existing lawful rights and interests, the proper handover of roles and authorities, and the uninterrupted operation of public oversight mechanisms.

CHAPTER 25 / LONG-TERM GOVERNANCE VISION

Chapter 25 | Long-Term Governance Vision

The long-term goal of Froggie DAO is to establish a community-driven autonomous governance system capable of continuously attracting global contributors, consistently cultivating governance talent, publicly limiting power, and holding executors accountable for outcomes. Original content, ecosystem products, international communities, and on-chain collaboration together form the practical foundation for such governance.

Community → Contribution → Reputation → Governance → Execution → Transparency → Community

Communities create value, which in turn builds credibility; this credibility underpins their eligibility for governance; governance enables collective decision-making; implementation yields tangible outcomes; and transparent documentation further strengthens community consensus. This cyclical process has enabled Froggie to evolve from early-stage cultural consensus toward institutionalization, transparency, and long-term global community governance.

Declaration of Creation Governance

Froggie DAO maintains that decentralization requires a clearly defined source of organizational authority, transparent rules, and ongoing community oversight. Governance participation eligibility is based on genuine contributions, a creator identity system, and formal procedures; governance responsibilities are consistently linked to accountability, term limits, and accountability mechanisms.

Chronicles the genesis of identity · Establishes long-term hierarchical organizational structures · Establishes formal governance to create order · Ensures professional execution of resolutions · Provides on-chain infrastructure validation results

Froggie DAO continues to drive its development journey—from personal trust to institutional trust, from institutional trust to on-chain trust, and from the genesis phase to global community self-governance.

CONTRIBUTION CREATES QUALIFICATION.

RESPONSIBILITY DEFINES GOVERNANCE.

RULES RESTRICT POWER. TRANSPARENCY BUILDS CONSENSUS.
